

E-Commerce Order Management Database System

Week Assignment: Requirement Analysis and Customer Database Module

1. Requirement Analysis

- Identify the main requirements of the e-commerce order management system.
- Identify users such as Customers and Admin.
- Analyze customer registration, login, product ordering, payment, and order tracking requirements.
- Identify the data that needs to be stored and managed.
- Define functional and non-functional requirements.

2. Customer Database Module

The customer module stores and manages customer information required for the e-commerce order management system.

Customer Details

- Customer ID
- Customer Name
- Email
- Phone Number
- Address
- City
- State
- Pincode
- Registration Date

Main Operations

- Add/Register a new customer
- View customer details
- Update customer information
- Delete customer information
- Search customer details

Sample Customer Table

Field	Data Type	Key
Customer_ID	INT	Primary Key
Customer_Name	VARCHAR(50)	—
Email	VARCHAR(100)	UNIQUE

Phone	VARCHAR(15)	—
Address	VARCHAR(150)	—
City	VARCHAR(50)	—
State	VARCHAR(50)	—
Pincode	INT	—

Expected Outcome

A clear understanding of the system requirements and a properly designed Customer Database Module for storing and managing customer information.
